

features and benefits

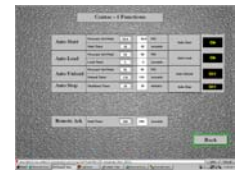

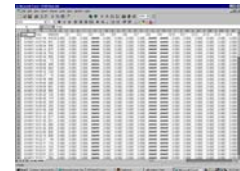

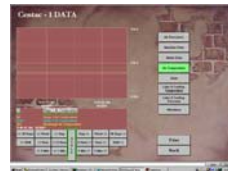

Air View gives you a real time, window into your compressed air operation in an open architecture environment. Total flexibility to create and customize with a familiar technology is yours.

AirView is a comprehensive, software based operator interface and information management tool designed to dovetail specifically with Air Sentry and AirMaster controls.

- **View multiple machine status**
- **View detailed machine status**
- **Start/stop machines**
- **Load/unload machines**
- **Configure Air Master load balancing**
- **Log data to disk**
- **Export csv* data to other programs**
- **View real time trending**
- **View historical trending**
- **View alarms and trip logs**
- **Acknowledge alarms**
- **Configure email and alpha-pager alerts**

AirView is powered by Rockwell Software RSVIEW™ and is very easy to customize. You can easily add screens and functions for other related processes as you need them.

AirView is provided with a high-end, office grade computer, communication hardware and 17" monitor. Installation on existing hardware running other applications is not recommended.

All purchased software is licensed in the users name. The AirView application is licensed to the user with provisions for user modification after warranty expires.

AirView application without purchased software key is available for user integration into existing systems with a limited warranty.
